

Semantic Technology Conference Unveils Latest Tools from Oracle, Cerebra, Metatomix, Siderean, and SchemaLogic

2nd Annual Conference delivers the most recent solutions in the field of Semantic Technology

SAN JOSE, Calif. -- February XX, 2006 – The Semantic Technology Conference (SemTech 2006), held at San Jose, California's Fairmont Hotel on March 6-9, will feature an impressive array of exhibitors presenting the industry's most innovative information software.

Featured exhibitors include:

- **Oracle** will display their newest tools for allowing organizations to obtain the most current and accurate information from their business systems.
- **Cerebra** will demonstrate how their leading standards-based semantic integration platform can work to best interpret, merge, and utilize organizational business information.
- **Metatomix** will illustrate the use of the industry's first and only end-to-end solutions platform for cumulatively generating operational intelligence, pinpointing business impact, and automatically effecting action.
- **Ontology Works** will discuss their ontology development software and ontology-based databases including the Integrated Ontology Development Environment (IODE), Knowledge Server, and High Performance Knowledge Server, as well as their Semantic Federation software for legacy databases, scheduled to move to production in the fall of 2006.

Additional exhibitors will include **Siderean Software, Silver Creek Systems, Intellidimension, Metalect, Revelytix, SchemaLogic, TopQuadrant, and SiberLogic.**

SemTech 2006 will function as a meeting place for IT and business executives to learn from the experts and exchange information and experiences with likeminded colleagues. It will also serve as a forum for the industry's leading software developers to unleash their most recent tools and applications products—a place where industry professionals can see exactly how these tools can be of service in meeting the challenges of creating and resolving meaning within the software of their specific organizations.

According to Tony Shaw, president of Wilshire Conferences, the organization responsible for producing the conference, even more than last year, exhibitors will play an extremely important role at the conference. "As we know, the technological advances in the field of semantic management move very quickly, and the developments of late have occurred at an even greater rate the before. This year, I think we are really going to be seeing a slew of products with new and superior capabilities for managing, sharing, and integrating data."

Conference Speakers and Sessions

Speakers at SemTech 2006 include such acclaimed keynotes as James Hendler, from the University of Maryland and Ora Lassila, of Nokia Research Center; Deborah McGuinness, of

Stanford University; and Mills Davis, of Project 10X as well as other respected innovators such as Eric Miller, the Semantic Web activity lead for the W3C (World Wide Web Consortium); Doug Lenat, founder of Cycorp; and Dave McComb, author of the book "*Semantics in Business Systems.*"

With more than 80 different sessions, SemTech 2006 has something for everyone – from basic non-technical business sessions on *Semantics in Perspective* to more technical discussions on *Semantics in GRID Computing*, *Semantic Web Services*, and specific industry ontologies.

SemTech 2006 is co-sponsored by major industry players including Oracle and Cerebra. Oracle, the world's largest enterprise software organization, is responsible for equipping businesses and governments around the globe with the tools needed to most effectively utilize their business systems. Cerebra leads the way in technology innovation and driving standards in the application and commercialization of semantic technology to unify data, content, and policy across organizations.
